## 1 GENERAL DESCRIPTION

The N9H26 series is built on the ARM926EJ-S CPU core and integrated with USB2.0 HS Host/Device, NAND/eMMC/SD/SDIO/SPI host controller, video codec (H.264), JPEG codec, 32-channel SPU (Sound Processing Unit), ADC, DAC and AAC accelerator for saving the BOM cost in various kinds of application needs to be the best choice.

The N9H26 series could also be ported under Linux OS to leverage the driver availability of emerging functionalities such as Wi-Fi, etc., maximum resolutions for N9H26 is 1024x768 @ TFT LCD panel. On the other hand, the open source code environment provides the product development more flexibility and Nuvoton's continuous optimizations in Linux provide customers with a cost-effective solution. Moreover, the 3rd parties USB and SDIO Wi-Fi modules are introduced to best utilize Wi-Fi streaming application.

To reduce system complexity while cutting the BOM cost, the N9H26 series provides MCP (Multi-Chip Package) to ensure higher performance and to minimize the system design efforts. Total BOM cost could be cut by employing 2-layer PCB along with the elimination of external parts, EMI prevention components and saving board space.

### 1.1 Applications

- HMI
- Home Appliance
- Advertisement

## 2 FEATURES

### ● CPU

- ARM926EJ-S 32-bit RISC CPU with 8KB I-Cache & 8KB D-Cache
- Frequency up to 264MHz@1.2V for typical operation condition
- JTAG interface supported for development and debugging

### ● Internal SRAM & ROM

- 16KB IBR internal booting ROM supported
- IBR booting messages displayed by UART console for debugging supported
- Different system booting modes supported:
  - ◆ Memory Card
    - SD card
    - SD-to-NAND flash bridge
  - ◆ NAND Interface
    - Raw NAND Flash
    - OTP ROM (N23512T / N231GT, MXIC ExtraROM)
  - ◆ SPI Flash
  - ◆ USB Mass Storage

### ● SDRAM MCP

- 16Mbx16 DDR2 MCP for N9H2651N

### ● EDMA (Enhanced DMA)

- Totally 11 DMA channels supported
  - ◆ 8 peripheral DMA channels for transfer between memory and on-chip peripherals, such as ADC, UART and SPI
  - ◆ 3 dedicated channels for memory-to-memory transfer
- Byte, half-word and word data width types supported
- Single and burst transfer modes supported
- Block transfer supported in memory-to-memory transfer channel
- Color format transformation supported in memory-to-memory transfer channel
  - ◆ Source color format could be RGB555, RGB565 and YCbCr422
  - ◆ Destination color format could be RGB555, RGB565 and YCbCr422
- Auto reload supported for continuous data transfer
- Interrupt generation supported in the half-of-transfer or end-of-transfer

### ● JPEG Codec

- Baseline sequential mode JPEG codec function compliant with ISO/IEC 10918-1 international JPEG standard supported.
- Planar Format
- Support to encode interleaved YCbCr 4:2:2/4:2:0 and gray-level (Y only) format image
- Support to decode interleaved YCbCr 4:4:4/4:2:2/4:2:0/4:1:1 and gray-level (Y only) format image
- Support to decode YCbCr 4:2:2 transpose format
- Support arbitrary width and height image encode and decode
- Support three programmable quantization-tables
- Support standard default Huffman-table and programmable Huffman-table for decode
- Support arbitrarily 1X~8X image up-scaling function for encode mode
- Support down-scaling function for encode and decode modes
- Support specified window decode mode
- Support quantization-table adjustment for bit-rate and quality control in encode mode
- Support rotate function in encode mode
- Packet Format

- Support to encode interleaved YUYV format input image, output bitstream 4:2:2 and 4:2:0 format
- Support to decode interleaved YCbCr 4:4:4/4:2:2/4:2:0 format image
- Support decoded output image RGB555, RGB565 and RGB888 formats.
- The encoded JPEG bit-stream format is fully compatible with JFIF and EXIF standards
- Support arbitrary width and height image encode and decode
- Support three programmable quantization-tables
- Support standard default Huffman-table and programmable Huffman-table for decode
- Support arbitrarily 1X~8X image up-scaling function for encode mode
- Support down-scaling function 1X~ 16X for Y422 and Y420, 1X~ 8X for Y444 for decode mode
- Support specified window decode mode
- Support quantization-table adjustment for bit-rate and quality control in encode mode
- **AES (Advance Encryption Standard) Engine**
  - Support both encryption and decryption.
  - Support only CBC (Cipher Block Chaining) mode.
  - All three kinds of key length: 128, 192, 256 bits are supported.
  - Built-in DMA supported.
- **H.264 Codec**
  - Supports ITU-T Recommendation H.264|ISO/IEC 14496-10 Advance Video Coding(AVC) Standard (MPEG-4 part 10) baseline profile Level 3.1 standard
  - Supports up to the 720p @25fps video resolution
  - Supports YUV 4:2:0 video input format (MB base)
  - Hardware block-base rate-control (CBR/VBR)
  - Pure hardware engine
- **Video Data Processor(VPE)**
  - Video Data Processor
    - ◆ Image/Video data format conversion
      - Source
        - Planar: YUV/YCbCr 444/422/420
        - Packet: YUV 422
      - Destination
        - Packet: YUV 422, RGB 555/565/888
    - ◆ Image/video 2-D rotation and coordinate transforming
      - Left/Right with 90/180 degrees, mirror, up-side-down, and flip/flop.
    - ◆ Arbitrary scaling up/down with the bilinear filter
    - ◆ Supports MMU DMA
- **CRC Generator/Checking Hardware Engine**
  - CRC16:  $x^{16}+x^{15}+x^2+1$  or  $x^{16}+x^{15}+x^5+1$  (CRC-CCITT)
  - CRC32:  $x^{32}+x^{26}+x^{23}+x^{22}+x^{16}+x^{12}+x^{11}+x^{10}+x^8+x^7+x^5+x^4+x^2+x+1$
- **VPOST**
  - 8/16/18/24-bit SYNC type and 8/9/16/18/24-bit MPU type TFT LCD supported
  - Color format supported:
    - ◆ YCbCr422, RGB565, RGB555, and RGB888 color formats supported for data in
    - ◆ YCbCr422, RGB565, RGB555, and RGB888 color formats supported for data out
  - SVGA (800x600), WVGA (800x480), D1 (720x480), VGA (640x480), WQVGA (480x272), QVGA (320x240) and HVGA (640x240) resolution supported
    - ◆ The maximum resolution is up to 1024x768 for TFT LCD panel
  - Display scaling to fit different size of LCD panels
    - ◆ Horizontal: At most 4.0x scale
    - ◆ Vertical: At most 3.0x scale

- For SYNC type LCD:
    - ◆ For 8-bit bus
      - CCIR601 YCbCr422 packet mode (NTSC/PAL) supported
      - CCIR601 RGB Dummy mode (NTSC/PAL) supported
      - CCIR656 interface supported
      - RGB Through mode supported
    - ◆ For 16/18/24-bit bus
      - Parallel pixel data output mode (1-pixel/1-clock)
  - Color format transform supported:
    - ◆ Color format transform between YCbCr422 and RGB565
    - ◆ Color format transform from YCbCr422 to RGB888
  - Support OSD functions to overlap system information like battery life, brightness tuning, volume tuning or muting, etc.
- **SPU (Sound Processing Unit)**
    - 7-bit volume control supported for each of 32 channels
    - 5-bit pan control supported for each L/R of 32 channels
    - 10-band equalizer supported
    - Special code supported for loop playing and event detection
  - **AAC accelerator**
    - MDCT/IMDCT engine
  - **I2S Controller**
    - I2S interface supported to connect external audio codec
    - 16/18/20/24-bit data format supported
  - **Storage Interface Controller**
    - Interface to NAND Flash:
      - ◆ 8-bit data bus width supported
      - ◆ SLC and MLC type NAND Flash supported
      - ◆ 512B, 2KB, 4KB, and 8KB page size NAND Flash supported
      - ◆ ECC24 algorithm supported for ECC generation, error detection and error correction
      - ◆ PBA-NAND flash supported
    - Interface to SD/MMC/SDIO/SDHC/micro-SD cards supported
      - ◆ SD-to-NAND flash bridge supported
    - DMA function supported to accelerate the data transfer between system memory and NAND Flash or SD/MMC/SDIO/SDHC/micro-SD
  - **USB Device Controller**
    - USB2.0 HS (High-Speed) x 1 port
    - 6 configurable endpoints supported
    - Control, Bulk, Interrupt and Isochronous transfers supported
    - Suspend and remote wakeup supported
  - **USB Host Controllers**
    - One USB 1.1 Host port (lite)
    - One USB 2.0 Host port
    - Over Current detection required
    - Fully compliant with USB Revision 1.1 and 2.0 specifications
    - Open Host Controller Interface (OHCI) Revision 1.0 compatible
    - High-speed (480Mbps), Full-speed (12Mbps) and low-speed (1.5Mbps) USB devices supported
    - Control, Bulk, Interrupt and Isochronous transfers supported
  - **Timer & Watch-Dog Timer**

- Four 32-bit with 8-bit pre-scalar timers supported
- One programmable 24-bit Watch-Dog Timer supported
- **PWM**
  - 4 PWM channel outputs supported
  - 16-bit counter supported for each PWM channel
  - Two 8-bit pre-scalars supported and each pre-scalar shared by two PWM channels
  - Two clock-dividers supported and each divider shared by two PWM channels
  - Two Dead-Zone generators supported and each generator shared by two PWM channels
  - Auto reloaded mode and one-shot pulse mode supported
  - Capture function supported
- **UART**
  - A high speed UART supported:
    - ◆ Baud rate is up to 1M bps
    - ◆ 4 signals TX, RX, CTS and RTS supported
  - A normal UART supported:
    - ◆ Baud rate is up to 115.2K bps
    - ◆ 2 signals TX and RX supported only
- **SPI**
  - Two SPI interfaces are supported
    - ◆ Both master and slave mode are supported in SPI interface 0
    - ◆ Only master mode is supported in SPI interface 1
      - Byte transfer with configurable stop interval supported
  - Supports 1/2/4 bit SPI NOR Flash interface timing specification
- **I2C**
  - One I2C channel supported
  - Compatible with Philips's I<sup>2</sup>C standard and only master mode supported
  - Multi-master operation supported
- **Advanced Interrupt Controller**
  - Total 32 interrupt source supported
  - Configurable interrupt type:
    - ◆ Low-active level triggered interrupt
    - ◆ High-active level triggered interrupt
    - ◆ Low-active edge (falling edge) triggered interrupt
    - ◆ High-active edge (rising edge) triggered interrupt
  - Individual interrupt mask bit for each interrupt source
  - 8 different priority levels supported
  - Low priority interrupt automatic masking supported for interrupt nesting
- **Internal SRAM**
  - 8KB embedded SRAM
  - Co-work with Fast Booting (<3 seconds) for reducing system power consumption.
- **RTC**
  - Independent power plane supported
  - 32.768 KHz crystal oscillation circuit supported
  - Build-in 32KHz RC oscillator
  - Time counter (second, minute, hour) and Calendar counter (day, month, year) supported
  - Alarm supported (second, minute, hour, day, month and year)
  - 12/24-hour mode and Leap year supported
  - Alarm to wake chip up from Standby mode or from Power-down mode supported
  - Wake chip up from Power-down mode by input pin supported
  - Power-off chip by register setting supported

- Power-on timeout is supported for low battery protection
- **GPIO**
  - 80 programmable general purpose I/Os supported and separated into 5 groups
  - Individual configuration supported for each I/O signal
  - Configurable interrupt control functions supported
  - Configurable de-bounce circuit supported for interrupt function
- **Audio DAC**
  - 16-bit stereo DAC supported with headphone driver output
  - H/W volume control supported
- **Audio ADC**
  - 16-bit Sigma-Delta ADC supported
- **General-Purpose ADC (SAR ADC)**
  - Multi-channel, 12-bit ADC supported
    - ◆ 4 channels dedicated for 4-wire resistive touch sensor inputs
    - ◆ 3 channels reserved for various purposes, like LVD (Low Voltage Detection), keypad input, and light sensor
    - ◆ 5-wire resistive touch sensor interface is also supported
    - ◆ Input voltage range from 0V ~ 3.3V supported
  - Maximum 16MHz input clock supported
  - Maximum 200K/s conversion rate supported
  - One high-speed channel for 1M SPS sampling rate
  - LVR (Low Voltage Reset) supported
- **Power Management**
  - Advanced power management including Power Down, Deep Standby, CPU Standby, and Normal Operating modes
    - ◆ Normal Operating Mode
      - Core power is 1.2V and chip is in normal operation
    - ◆ CPU Standby Mode
      - Core power is 1.2V and only ARM CPU clock is turned OFF
    - ◆ Deep Standby Mode
      - Core power is 1.2V and all IP clocks are turned OFF
    - ◆ Power Down Mode
      - Only the RTC power is ON. Other 3.3V and 1.2V power are OFF
- **Operating Voltage**
  - I/O: 3.3V
  - Core: 1.2V
  - LPDDR/DDR2: 1.8V
- **Package**
  - LQFP-128

### 3.4 Pin Description

Pin No	Name	Type	Group	Description
1	SD0_D[2]	I/O	SD0	SD Interface Port 0 Data Bit 2.
	TRST_b	O	JTAG	Alternative JTAG Interface Test Reset, Low Active.
	GPE[4]	I/O	GPIOE	GPIO Port E Bit 4.
	LVD_O	O	SYSTEM	Low Voltage Detect Indicator, Low Active.
2	SD0_D[3]	I/O	SD0	SD Interface Port 0 Data Bit 3.
	GPE[5]	I/O	GPIOE	GPIO Port E Bit 5.
	POR_O	O	SYSTEM	Power On Reset, Low Active.
3	SD0_CMD	I/O	SD0	SD Interface Port 0 Command.
	TMS_b	O	JTAG	Alternative JTAG Interface Test Mode Select.
	GPE[6]	I/O	GPIOE	GPIO Port E Bit 6.
4	SD0_CLK	I/O	SD0	SD Interface Port 0 Clock.
	TCK_b	O	JTAG	Alternative JTAG Interface Test Clock.
	GPE[7]	I/O	GPIOE	GPIO Port E Bit 7.
5	SD0_D[0]	I/O	SD0	SD Interface Port 0 Data Bit 0.
	TDI_b	I	JTAG	Alternative JTAG Interface Test Data In.
	GPE[2]	I/O	GPIOE	GPIO Port E Bit 2.
6	SD0_D[1]	I/O	SD0	SD Interface Port 0 Data Bit 1.
	TDO_b	O	JTAG	Alternative JTAG Interface Test Data Out.
	GPE[3]	I/O	GPIOE	GPIO Port E Bit 3.
7	SPI1_DO_a	O	SPI1	Alternative SPI Interface Port 1 Data Out.
	LVDATA[23]	O	LCM	LCD Interface Data Bit 23.
	GPB[12]	I/O	GPIOB	GPIO Port B Bit 12.
8	SPI1_DI_a	I	SPI1	Alternative SPI Interface Port 1 Data In.
	LVDATA[22]	O	LCM	LCD Interface Data Bit 22.
	GPB[11]	I/O	GPIOB	GPIO Port B Bit 11.
9	UD_CDET	I	USB20	USB Device Connect Detect, High Active.
10	VDD12	P	VDD12	Core Logic Power.
11	MVDD	P	MVDD	SDRAM I/F Power.
12	MVDD	P	MVDD	SDRAM I/F Power.
13	SPI1_CS0_a	O	SPI1	Alternative SPI Interface Port 1 Device Select 0, Low Active.
	LVDATA[21]	O	LCM	LCD Interface Data Bit 21.
	GPB[10]	I/O	GPIOB	GPIO Port B Bit 10.
14	SPI1_CLK_a	O	SPI1	Alternative SPI Interface Port 1 Clock.
	LVDATA[20]	O	LCM	LCD Interface Data Bit 20.

	GPB[9]	I/O	GPIOB	GPIO Port B Bit 9.
15	LVDATA[19]	O	LCM	LCD Interface Data Bit 19.
	GPB[8]	I/O	GPIOB	GPIO Port B Bit 8.
16	LVDATA[18]	O	LCM	LCD Interface Data Bit 18.
	GPB[7]	I/O	GPIOB	GPIO Port B Bit 7.
17	I2S_DIN_a	I	I2S	Alternative I2S Interface Data Input.
	GPB[6]	I/O	GPIOB	GPIO Port B Bit 6.
18	I2S_DOUT_a	O	I2S	Alternative I2S Interface Data Output.
	SD1_D[2]	I/O	SD1	SD Interface Port 1 Data Bit 2.
	GPB[5]	I/O	GPIOB	GPIO Port B Bit 5.
19	I2S_WS_a	O	I2S	Alternative I2S Interface Left/Right Channel Clock.
	SD1_D[3]	I/O	SD1	SD Interface Port 1 Data Bit 3.
	GPB[4]	I/O	GPIOB	GPIO Port B Bit 4.
20	I2S_BCLK_a	O	I2S	Alternative I2S Interface Bit Clock.
	SD1_CMD	I/O	SD1	SD Interface Port 1 Command.
	GPB[3]	I/O	GPIOB	GPIO Port B Bit 3.
21	I2S_MCLK_a	O	I2S	Alternative I2S Interface Master Clock.
	SD1_CLK	I/O	SD1	SD Interface Port 1 Clock.
	GPB[2]	I/O	GPIOB	GPIO Port B Bit 2.
22	SD1_D[0]	I/O	SD1	SD Interface Port 1 Data Bit 0.
	GPB[1]	I/O	GPIOB	GPIO Port B Bit 1.
23	SD1_D[1]	I/O	SD1	SD Interface Port 1 Data Bit 1.
	GPB[0]	I/O	GPIOB	GPIO Port B Bit 0.
24	XOUT	O	SYSTEM	12MHz Crystal Output.
25	XIN	I	SYSTEM	12MHz Crystal In.
26	VDD33	P	VDD33	I/O Power.
27	VDD12	P	VDD12	Core Logic Power.
28	UD_PLL_VDD12	P	SYSTEM	PLL and USB Core Power.
29	UD_DM	I/O	USBD20	USB 2.0 Device D-.
30	UD_DP	I/O	USBD20	USB 2.0 Device D+.
31	UD_VDD33	P	USBD20	USB 2.0 PHY Power.
32	UD_REXT	I	USBD20	External Resistor 12.1K Resistor Connected to Ground.
33	ADC_VDD33	AP	SAR_ADC	SAR-ADC Power.
34	ADC_TP_XM	AI	SAR_ADC	Touch Panel XM.
	SPI1_DI_b	I	SPI1	Alternative SPI Interface Port 1 Data In.
	SDIO_D[2]_b	I/O	SDIO	Alternative SDIO Interface Data Bit 2.

4.1 N9H26 Series Block Diagram

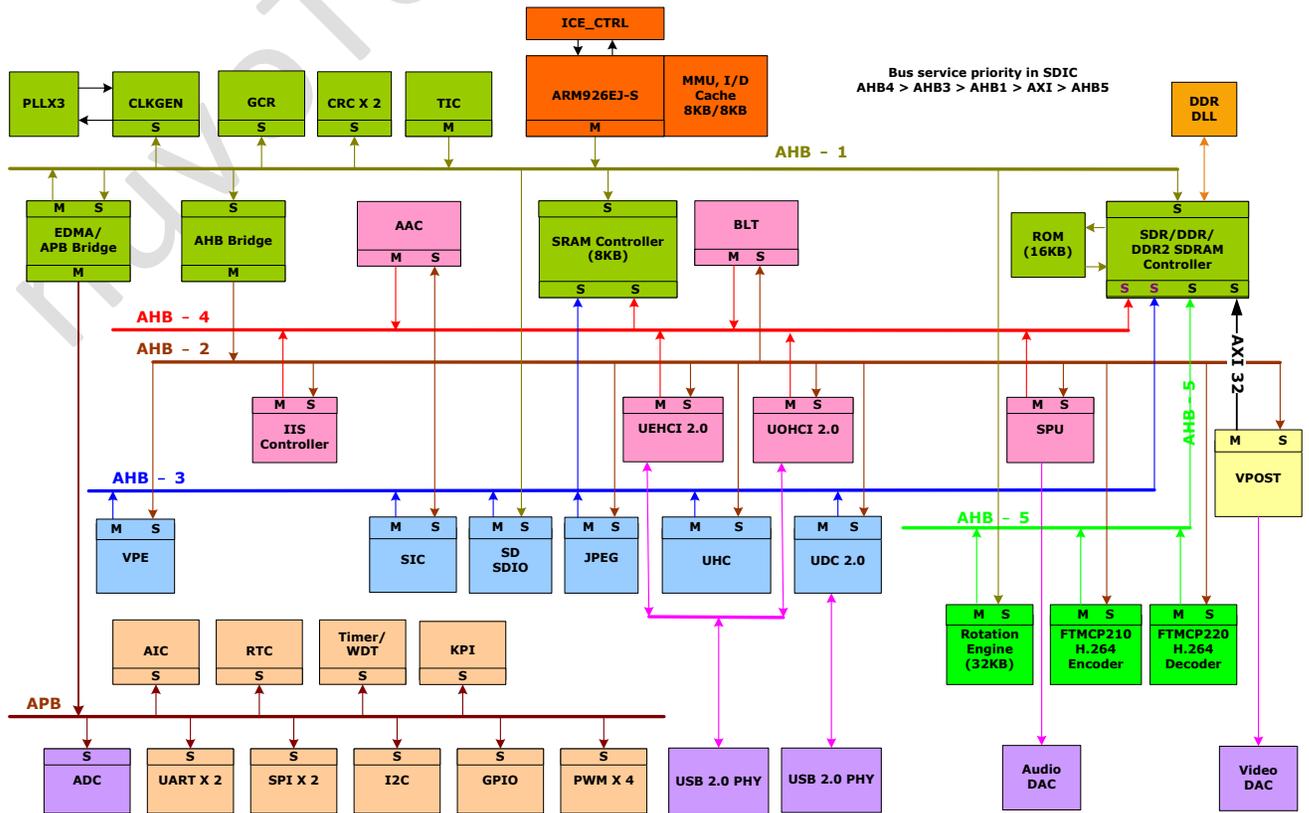

Figure 4.1 N9H26 Series Block Diagram

## 5 FUNCTIONAL DESCRIPTION

### 5.1 ARM® ARM926EJ-S CPU Core

#### 5.1.1 Overview

The ARM926EJ-S CPU core is a member of the ARM9 family of general-purpose microprocessors. The ARM926EJ-S CPU core is targeted at multi-tasking applications where full memory management, high performance, and low power are all important.

The ARM926EJ-S CPU core supports the 32-bit ARM and 16-bit Thumb instruction sets, enabling the user to choose between high performance and high code density. The ARM926EJ-S CPU core includes features for efficient execution of Java byte codes, providing Java performance similar to JIT, but without the associated code overhead.

The ARM926EJ-S processor provides support for external coprocessor enabling floating-point or other application-specific hardware acceleration to be added. The ARM926EJ-S CPU core implements ARM architecture version 5TEJ.

The ARM926EJ-S processor has a Harvard cached architecture and provides a complete high-performance processor subsystem, including:

- An ARM9EJ-S integer core.
- A Memory Management Unit (MMU).
- Separate instruction and data cache.
- Separate instruction and data AMBA AHB bus interfaces.

## 5.2 System Manager

### 5.2.1 Overview

The system management describes following information and functions.

- System Memory Map
- Power-On Setting
- Bus Arbitration Mode
- Power Management
- IBR (Internal Boot ROM) Sequence
- System management registers for product ID, functional reset and multi-function pin control.

## 5.3 Clock Controller (CLK\_CTL)

### 5.3.1 Overview

The clock controller generates the clocks for the whole chip, it include all of IPs on AHB, APB and engine clock like USB, UART and so on. There are three PLLs in this chip, and the PLL clock source is from the external crystal input. It also implements the power control function, include the individually clock on or off control register, clock source selector and divider. These functions minimize the extra power consumption and the chip run on the only just condition. On the power down mode the controller turn off the crystal oscillator to minimize the chip power consumption.

## 5.4 SDRAM Interface Controller (SDIC)

### 5.4.1 Overview

The SDRAM Controller support Low-Power DDR and DDR2 type SDRAM. The memory device size type can be from 64M bit and up to 512M bits. Only 16-bit data bus width is supported. The total system memory size can be from 8M-byte and up to 64M-byte for different SDRAM configuration.

## 5.5 2D Blitting Accelerator

### 5.5.1 Overview

The 2D blitting accelerator features are built on top of the FlashLite Bitmap rendering feature. It improves rendering performance of bitmap objects (source image) onto the frame buffer (destination image).

## 5.6 VPE Video Data Processing Engine

### 5.6.1 Overview

Video Data Processing Engine (VPE) contains the acceleration engines for still images and video movies.

The first function is for the image/video data format conversion and the second function is for the image/video 2D rotation or the coordinate transformation.

## 5.7 JPEG Codec (JPEG)

### 5.7.1 Overview

The JPEG Codec supports Baseline Sequential Mode JPEG still image compression and decompression that is fully compliant with ISO/IEC International Standard 10918-1 (T.81).

## 5.8 H.264 Video Codec

### 5.8.1 Overview

H.264 DEC is a video decoder, which supports the H.264 standard baseline profile. H.264 DEC is compliant with the ITU-T Recommendation H.264|ISO/IEC 14496-10 Advanced Video Coding Standard (MPEG 4 Part 10). This decoder is capable of decoding the video streams with a resolution of up to 720 x 480 at a frame rate of up to 60 frames per second or decoding the video streams with a resolution of up to 2048 x 1024 at a frame rate of up to 10 frames per second.

## 5.9 LCD Display Interface Controller (VPOST)

### 5.9.1 Overview

The main purpose of Display Controller is used to display the video/image data to LCD device or connect with external TV-encoder. The video/image data source may come from the H.264 video codec, JPEG decoder and the OSD pattern which have been stored in system memory (SDRAM). The input data format of the display controller can be packet YUV422, packet YUV444, packet RGB444, packet RGB565, packet RGB666, and packet RGB888. The OSD (On Screen Display) function supports packet YUV422 and 8/16/24-bit direct-color mode. The LCD controller supports both sync-type and MPU-type LCDM. This LCD Controller is a bus master and can transfer display data from system memory (SDRAM) without CPU intervention.

## 5.10 Sound Processing Unit (SPU)

### 5.10.1 Overview

The SPU performs 32 channels audio input and 16-bit stereo output to DAC and I2S. SPU support 3 data-types (E-MDPCM (4bit), PCM16, LP8) with event and raw PCM16 mono/stereo and Tone.

## 5.11 I<sup>2</sup>S Controller (I<sup>2</sup>S)

### 5.11.1 Overview

The audio controller consists of I2S protocols to interface with external audio CODEC. The I2S interface supports 16, 18, 20 and 24-bit left/right precision in record and playback. When operating in 18/20/24-bit precision, each left/right-channel sample is stored in a 32-bit word. Each left/right-channel sample has 24/20/18 MSB bits of valid data and other LSB bits are the padding zeros. When operating in 16-bit precision, right-channel sample is stored in MSB of a 32-bit word and left-channel sample is stored in LSB of a 32-bit word.

## 5.12 Storage Interface Controller

### 5.12.1 Overview

The Storage Interface Controller (SIC) has DMAC unit and FMI unit. The DMAC unit provides a DMA (Direct Memory Access) function for FMI to exchange data between system memory and shared buffer (128 bytes). The FMI control the interface of SD/SDHC/SDIO/MMC or NAND/SM. The storage interface controller can support SD/SDHC/SDIO/MMC card and NAND-type flash and the FMI is cooperated with DMAC to provide a fast data transfer between system memory and cards.

## 5.13 USB 2.0 Device Controller (USBD)

### 5.13.1 Overview

The USB device controller interfaces the AHB bus and the UTMI bus. The USB controller contains both the AHB master interface and AHB slave interface. CPU programs the USB controller registers through the AHB slave interface. For IN or OUT transfer, the USB device controller needs to write data to memory or read data from memory through the AHB master interface. The USB device controller is compliant with USB 2.0 specification and it contains four configurable endpoints in addition to control endpoint. These endpoints could be configured to BULK, INTERRUPT or ISO. The USB device controller has a built-in DMA to relieve the load of CPU.

## 5.14 USB Host Controller (USBH)

### 5.14.1 Overview

The Universal Serial Bus (USB) is a fast, bi-directional, isochronous, low-cost, dynamically attachable serial interface standard intended for modem, scanners, PDAs, keyboards, mice, and digital imaging devices. The USB is a 4-wire serial cable bus that supports serial data exchange between a Host Controller and a network of peripheral devices. The attached peripherals share USB bandwidth through a host-scheduled, token-based protocol. Peripherals may be attached, configured, used, and detached, while the host and other peripherals continue operation (i.e. hot plug and unplug is supported).

## 5.15 Enhanced DMA Controller

### 5.15.1 Overview

The N9H26 series contains an enhanced direct memory access (EDMA) controller that transfers data to and from memory or transfer data to and from APB. The EDMA controller has 6-channel DMA that include 2 channel VDMA (Video-DMA, Memory-to-Memory) and four channels PDMA (Peripheral-to-Memory or Memory-to-Peripheral). For channel0/5 VDMA mode, it also support color format transform and stripe mode transfer. For PDMA channel (EDMA CH1~CH4), it can transfer data between the Peripherals APB IP (ex: UART, SPI, ADC....) and Memory.

## 5.16 Advanced Interrupt Controller (AIC)

### 5.16.1 Overview

An interrupt temporarily changes the execution sequence of a program to react to a particular event such as power failure, watchdog timer timeout, engines complete, system events, external event trigger and so on. The ARM9 processor provides two modes of interrupts, the Fast Interrupt (FIQ) mode for critical session and the Interrupt (IRQ) mode for general purpose. The IRQ exception is occurred when the nIRQ input is asserted. Similarly, the FIQ exception is occurred when the nFIQ input is asserted. The FIQ has privilege over the IRQ and can preempt an ongoing IRQ. It is possible to ignore the FIQ and the IRQ by setting the F-bit and I-bit in the current program status register (CPSR).

## 5.17 General Purpose I/O (GPIO)

### 5.17.1 Overview

80 pins of General Purpose I/O are shared with special feature functions.

Supported Features of these I/O are: input or output facilities, pull-up resistors.

All these general purpose I/O functions are achieved by software programming setting and I/O cells selected from SMIC universal standard I/O Cell Library. And the following figures illustrate the control mechanism to achieve the GPIO functions.

## 5.18 Timer Controller (TMR)

### 5.18.1 Overview

The timer module includes four channels, TIMER0~TIMER3, which allow you to easily implement a counting scheme for use. The timer can perform functions like frequency measurement, event counting, interval measurement, clock generation, delay timing, and so on. The timer possesses features such as adjustable resolution, programmable counting period, and detailed information. The timer can generate an interrupt signal upon timeout, or provide the current value of count during operation.

## 5.19 Watchdog Timer (WDT)

### 5.19.1 Overview

The purpose of Watchdog Timer (WDT) is to perform a system reset when system runs into an unknown state. This prevents system from hanging for an infinite period of time. Besides, this Watchdog Timer supports the function to wake-up system from Idle/Power-down mode.

## 5.20 Real Time Clock (RTC)

### 5.20.1 Overview

Real Time Clock (RTC) block can be operated by independent power supply while the system power is off. The RTC uses a 32.768 KHz external crystal or internal oscillator. It can transmit data to CPU with BCD values. The data includes the time by (second, minute and hour), the day by (day, month and year). In addition, to achieve better frequency accuracy, the RTC counter can be adjusted by software.

## 5.21 I<sup>2</sup>C Synchronous Serial Interface Controller (I<sup>2</sup>C)

### 5.21.1 Overview

I2C is a two-wire, bi-directional serial bus that provides a simple and efficient method of data exchange between devices. The I2C standard is a true multi-master bus including collision detection and arbitration that prevents data corruption if two or more masters attempt to control the bus simultaneously.

## 5.22 Pulse Width Modulation (PWM)

### 5.22.1 Overview

There are 4 PWM-Timers. The 4 PWM-Timers has 2 Pre-scale, 2 clock divider, 4 clock selectors, 4 16-bit counters, 4 16-bit comparators, 2 Dead-Zone generators. They are all driven by Crystal or system clock. Each can be used as a timer and issues interrupt independently.

## 5.23 UART Interface Controller (UART)

### 5.23.1 Overview

The N9H26 series provides two channels of Universal Asynchronous Receiver/Transmitters (UART). UART0 supports High Speed UART and UART1 perform Normal Speed UART, besides, only UART0 support flow control function.

## 5.24 SPI Interface Controller (SPI Master/Slaver)

### 5.24.1 Overview

The MICROWIRE/SPI Synchronous Serial Interface performs a serial-to-parallel conversion on data characters received from the peripheral, and a parallel-to-serial conversion on data characters received from CPU. This interface can drive up to 2 external peripherals and is seen as the master or can be driven as the slave.

## 5.25 Analog to Digital Converter (ADC)

### 5.25.1 Overview

The N9H26 series contains one 12-bit Successive Approximation Register analog-to-digital converter (SAR A/D converter) with eight input channels. The A/D converter supports two operation modes: 4-wire or 5-wire mode. The ADC is especially suitable to act as touch screen controller. Battery voltage detection could be easily accomplished by the SAR ADC. It has keypad interrupt signal generator.

## 5.26 Keypad Interface (KPI)

### 5.26.1 Overview

The Keypad Interface (KPI) is an APB slave with configurable minimum 2-row up to 16-row scan output and minimum 1-column up to 4-column scan input. Any keys in the array pressed or released are de-bounced and generate an interrupt.

## 5.27 Audio Record Control

### 5.27.1 Overview

The Audio Record control has two parts. One is the analog IP (sigma-delta ADC), and the other is digital audio record control.

The analog IP interface is I2C and I2S. I2C is for command, and I2S is for audio data.

Digital part includes three blocks, AGC and NG block, I2C wrapper, and Register. The Register block is to handshake with APB bus. AGC and NG are to control the gain automatically. I2C wrapper is for transferring the command to the ADC.

## 5.28 AAC IMDCT/MDCT Engine

### 5.28.1 Overview

AAC IMDCT/MDCT engine is designed to calculate the data for the AAC decoder or encoder.

## 5.29 Secure-Digital Input / Output Controller

### 5.29.1 Overview

The Secure-Digital Input/ Output Controller (SDIO) has DMAC unit and SD unit. The DMAC unit provides a DMA (Direct Memory Access) function for SD to exchange data between system memory and shared buffer (128 bytes), and the SD unit controls the interface of SD/SDHC/SDIO/MMC. The SDIO controller can support SD/SDHC/SDIO/MMC card and the FMI is cooperated with DMAC to provide a fast data transfer between system memory and cards.

## 6 ELECTRICAL CHARACTERISTICS

### 6.1 Absolute Maximum Ratings

Parameters	Values
Ambient Temperature	-20 °C ~ 85 °C
Storage Temperature	-40 °C ~ 125 °C
Voltage On Any Pin	-0.3V ~ 3.6V
Power Supply Voltage (Core Logic)	-0.5V ~ 1.5V
Power Supply Voltage (I/O Buffer)	-0.5V ~ 4.6V
Injection Current (Latch-Up Testing)	100mA
Crystal Frequency	1MHz ~ 20MHz

**Note:** Exposure to conditions beyond those listed under absolute maximum ratings may adversely affects the lift and reliability of the device.

## 6.2 DC Electrical Characteristics

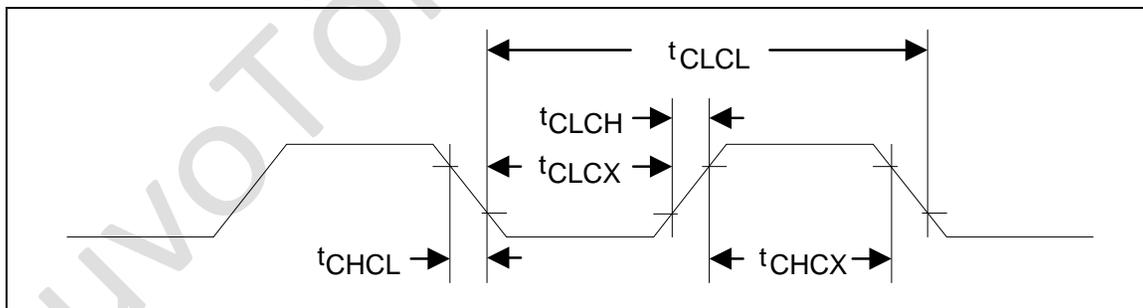

### 6.2.1 N9H26 Series DC Electrical Characteristics

(VDD-VSS=3.3 V, TA = 25°C, FOSC = 12 MHz unless otherwise specified.)

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit	
VDD33	I/O Buffer Post-Driver Voltage		2.97	3.30	3.63	V	
VDD12	Core Logic Voltage	264MHz N9H26xxN	1.14	1.20	1.3	V	
MVDD	SDRAM Voltage	396MHZ N9H26xxN	1.75	1.80	1.9	V	
RTC_VDD	RTC Power Supply		2.0		3.6	V	
I <sub>RTC_VDD</sub>	RTC Supply Current			10		uA	
V <sub>IH</sub>	Input High Voltage		2.0		VDD33+0.3	V	
V <sub>IL</sub>	Input Low Voltage				0.8	V	
V <sub>T</sub>	Threshold Point			1.65		V	
V <sub>T+</sub>	Schmitt Trigger Low to High Threshold Point		1.7		1.96	V	
V <sub>T-</sub>	Schmitt Trigger High to Low Threshold Point		0.87		1.11	V	
I <sub>CC1</sub>	Supply Current 1 (Core@1.2V)	CPU@264MHz DDRII@396MHz H.264 ENC/DEC All Engines ON		330		mA	
I <sub>CC2</sub>	Supply Current 2 (Core@1.2V)	CPU@264MHz DDRII@396MHz		200		mA	
I <sub>L</sub>	Input Leakage Current		-10		10	uA	
I <sub>OZ</sub>	Tri-State Output Leakage Current		-10		10	uA	
R <sub>PU</sub>	Pull-Up Resistor		53	66	120	kohm	
R <sub>PD</sub>	Pull-Down Resistor		37	50	120	kohm	
V <sub>OL</sub>	Output Low Voltage				0.4	V	
V <sub>OH</sub>	Output High Voltage		2.4			V	
I <sub>OL</sub>	Low Level Output Current	4mA I/O	V <sub>OL</sub> = 0.4V	4.2	6.5	8	mA
		8mA I/O	V <sub>OL</sub> = 0.4V	8.4	13	16	mA
I <sub>OH</sub>	High Level Output Current	4mA I/O	V <sub>OH</sub> = 2.4V	4.7	9.6	14.9	mA
		8mA I/O	V <sub>OH</sub> = 2.4V	9.4	19.2	29.8	mA

### 6.3 AC Electrical Characteristics

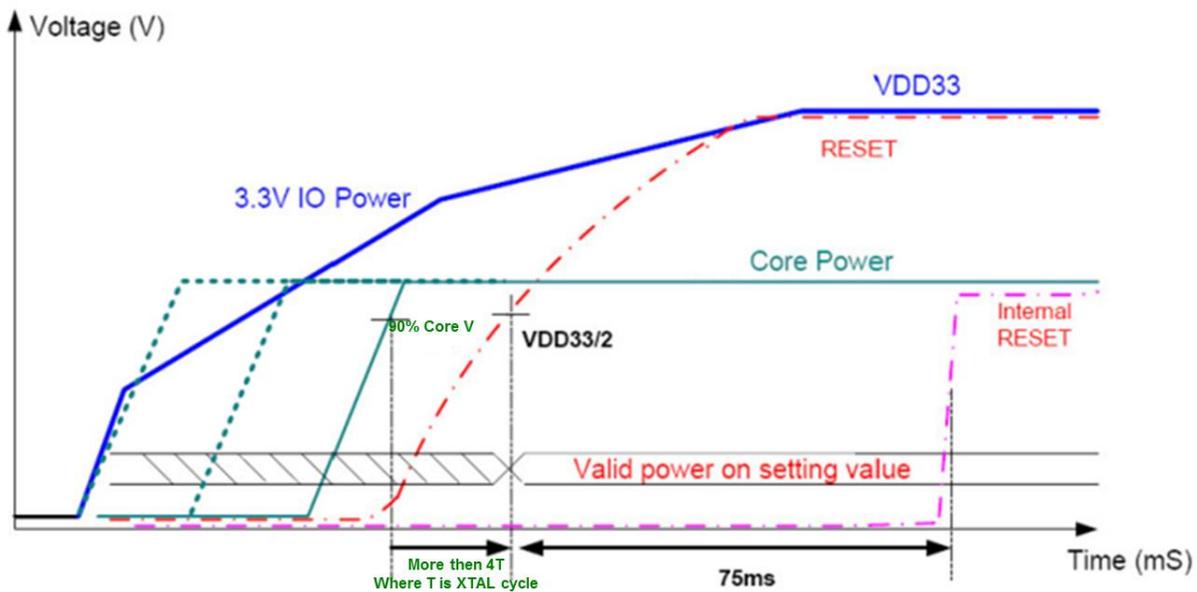

#### 6.3.1 External 12 MHz Crystal

**Note:** Duty cycle is 50%.

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNITS	CONDITION
Clock High Time	$t_{CHCX}$	20	-	125	nS	
Clock Low Time	$t_{CLCX}$	20	-	125	nS	
Clock Rise Time	$t_{CLCH}$	-	-	10	nS	
Clock Fall Time	$t_{CHCL}$	-	-	10	nS	

6.3.2 Power-on Sequence & RESET

6.3.2.1 Power up Sequence

- ◆ Higher Voltage (3.3V) First
- ◆ Sequence:  $T_{33} \geq T_{18} \geq T_{12}$ , (The time of delay gap between  $< 500\mu\text{s}$  is prefer)

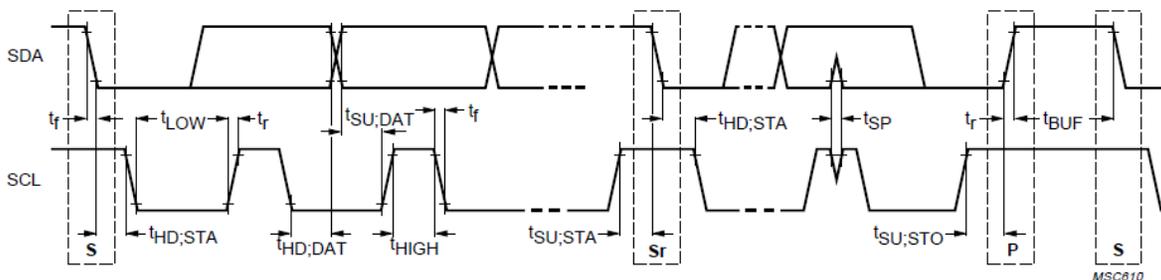

6.3.2.2 Power down Sequence,

- ◆ The lower voltage (1.2V) should be powered down first
- ◆ Sequence:  $T_{12} \geq T_{18} \geq T_{33}$

Note.

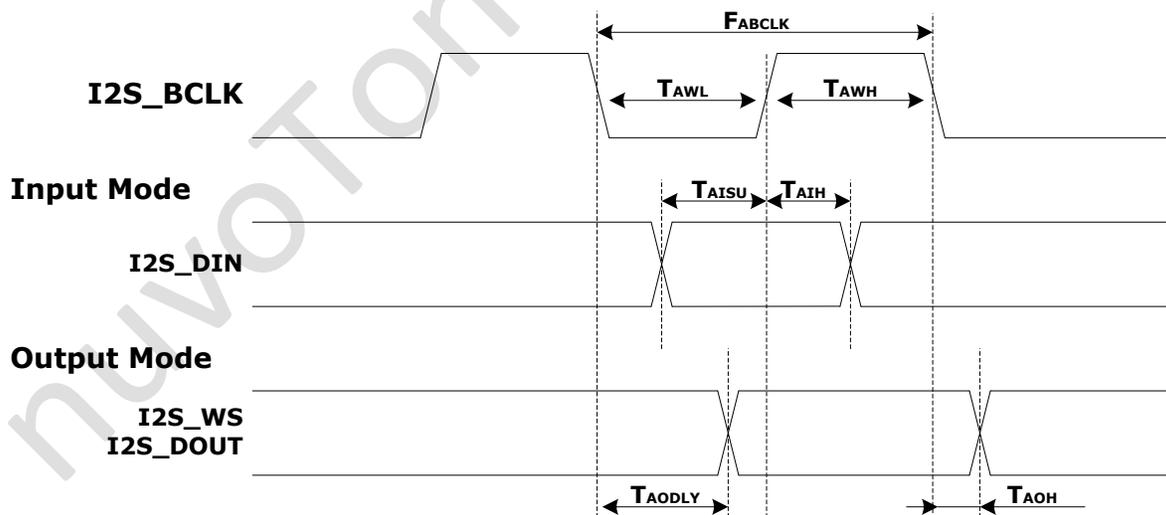

- T12 represents 1.2V powered time for Core power
- T18 represents 1.8V powered time for MVDD power
- T33 represents 3.3V powered time for I/O power

6.3.3 I2C Interface

PARAMETER	SYMBOL	STANDARD-MODE		FAST-MODE		UNIT
		MIN.	MAX.	MIN.	MAX.	
SCL clock frequency	$f_{SCL}$	0	100	0	400	kHz
Hold time (repeated) START condition. After this period, the first clock pulse is generated	$t_{HD;STA}$	4.0	–	0.6	–	$\mu$ s
LOW period of the SCL clock	$t_{LOW}$	4.7	–	1.3	–	$\mu$ s
HIGH period of the SCL clock	$t_{HIGH}$	4.0	–	0.6	–	$\mu$ s
Set-up time for a repeated START condition	$t_{SU;STA}$	4.7	–	0.6	–	$\mu$ s
Data hold time: for CBUS compatible masters (see NOTE, Section 10.1.3) for I <sup>2</sup> C-bus devices	$t_{HD;DAT}$	5.0 0 <sup>(2)</sup>	– 3.45 <sup>(3)</sup>	– 0 <sup>(2)</sup>	– 0.9 <sup>(3)</sup>	$\mu$ s $\mu$ s
Data set-up time	$t_{SU;DAT}$	250	–	100 <sup>(4)</sup>	–	ns
Rise time of both SDA and SCL signals	$t_r$	–	1000	20 + 0.1C <sub>b</sub> <sup>(5)</sup>	300	ns
Fall time of both SDA and SCL signals	$t_f$	–	300	20 + 0.1C <sub>b</sub> <sup>(5)</sup>	300	ns
Set-up time for STOP condition	$t_{SU;STO}$	4.0	–	0.6	–	$\mu$ s
Bus free time between a STOP and START condition	$t_{BUF}$	4.7	–	1.3	–	$\mu$ s
Capacitive load for each bus line	C <sub>b</sub>	–	400	–	400	pF
Noise margin at the LOW level for each connected device (including hysteresis)	V <sub>nL</sub>	0.1V <sub>DD</sub>	–	0.1V <sub>DD</sub>	–	V
Noise margin at the HIGH level for each connected device (including hysteresis)	V <sub>nH</sub>	0.2V <sub>DD</sub>	–	0.2V <sub>DD</sub>	–	V

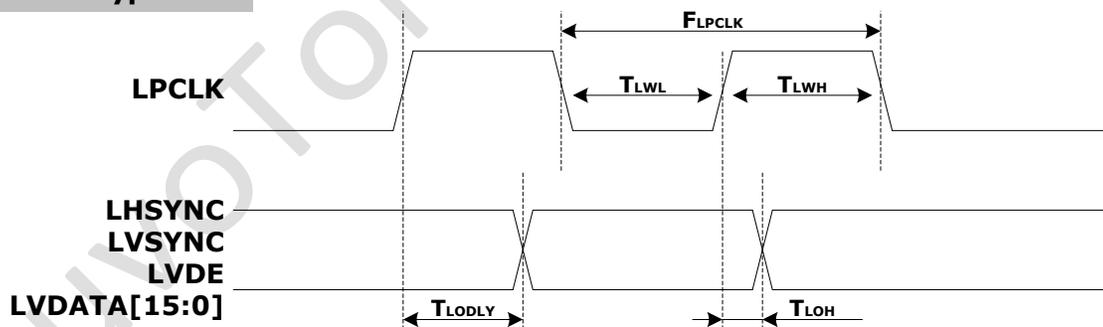

6.3.4 I2S Interface

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
$F_{ABCLK}$	I2S_BCLK Clock Frequency		-	-	16	MHz
$T_{AWL}$	I2S_BCLK Clock Low Time		31.25	-	-	ns
$T_{AWH}$	I2S_BCLK Clock High Time		31.25	-	-	ns
$T_{AISU}$	I2S_DIN Setup Time		10	-	-	ns
$T_{AIH}$	I2S_DIN Hold Time		10	-	-	ns
$T_{AODLY}$	I2S_DOUT Output Delay Time		-	-	0.5	ns
$T_{AOH}$	I2S_DOUT Output Hold Time		0.1	-	-	ns

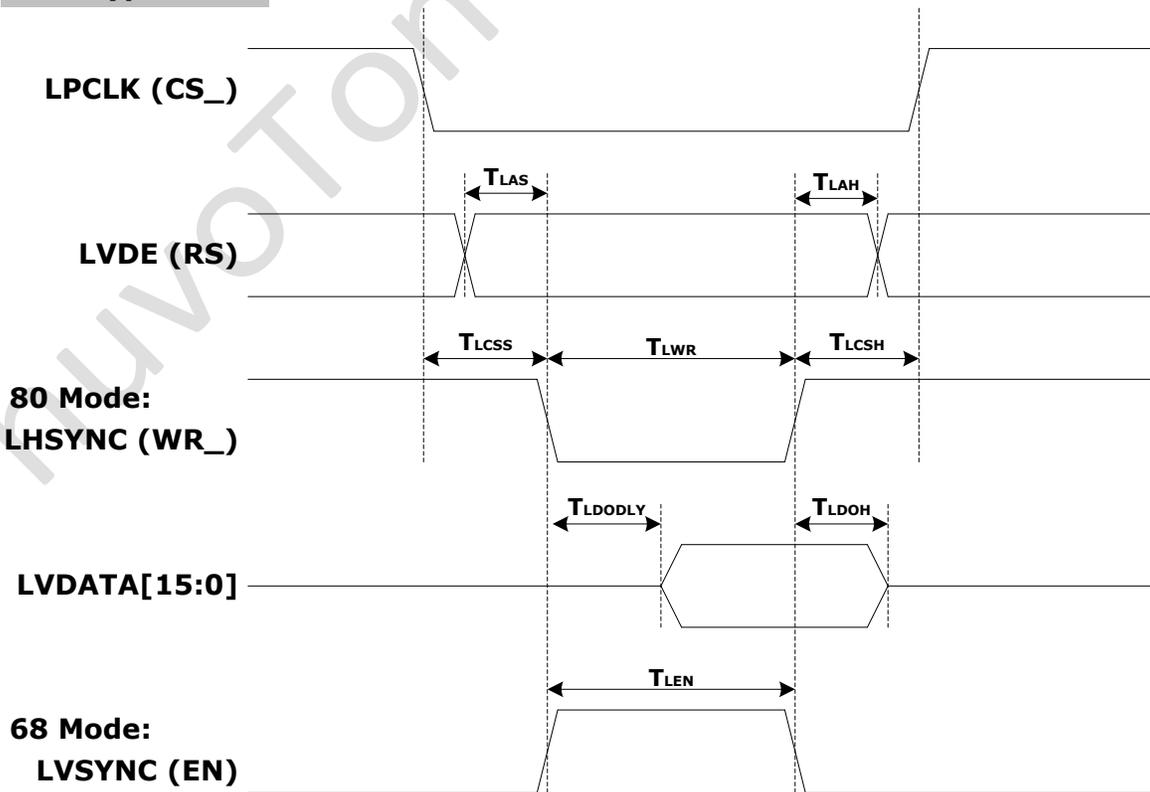

6.3.5 LCD/Display Interface

**SYNC Type LCD**

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
$F_{LPCLK}$	LPCLK Clock Frequency		-	-	120	MHz
$T_{LWL}$	LPCLK Clock Low Time		18.5	-	-	ns
$T_{LWH}$	LPCLK Clock High Time		18.5	-	-	ns
$T_{LODLY}$	LHSYNC, LVSYNC, LVDE and LVDATA Output Delay Time		-	-	1.3	ns
$T_{LOH}$	LHSYNC, LVSYNC, LVDE and LVDATA Output Hold Time		0.67	-	-	ns

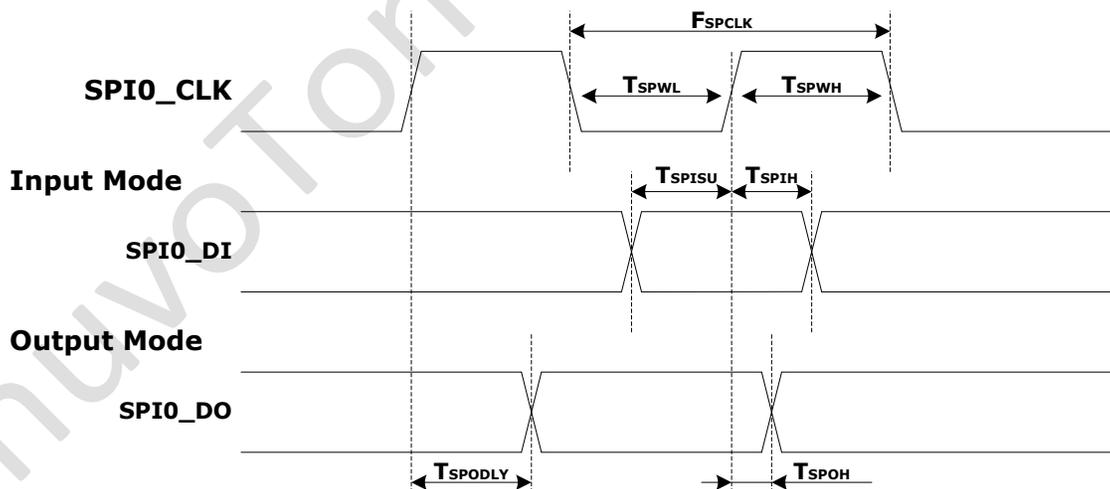

**MPU Type LCD**

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
$T_{LCSS}$	CS_ to WR_ Setup Time		2	-	-	PCLK
$T_{LASH}$	CS_ to WR_ Hold Time		1	-	-	PCLK
$T_{LAS}$	RS to WR_ Setup Time		1	-	-	PCLK
$T_{LAH}$	RS to WR_ Hold Time		1	-	-	PCLK
$T_{LDODLY}$	LVDATA Output Delay Time		-	-	1	PCLK
$T_{LDOH}$	LVDATA Output Hold Time		1	-	-	PCLK
$T_{LWR}$	WR_ Pulse Width	80 Mode	1	-	-	PCLK
$T_{LEN}$	EN Pulse Width	68 Mode	1	-	-	PCLK

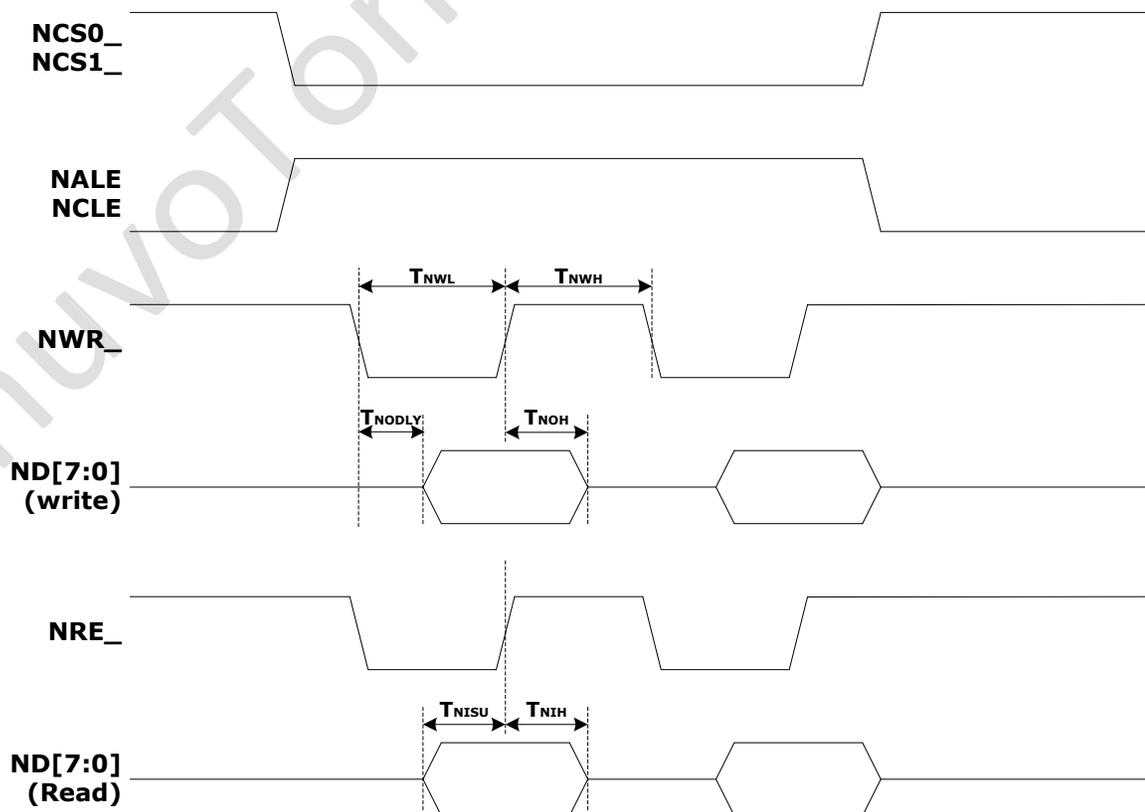

Note: Where PCLK is APB bus clock.

6.3.6 SPI Interface

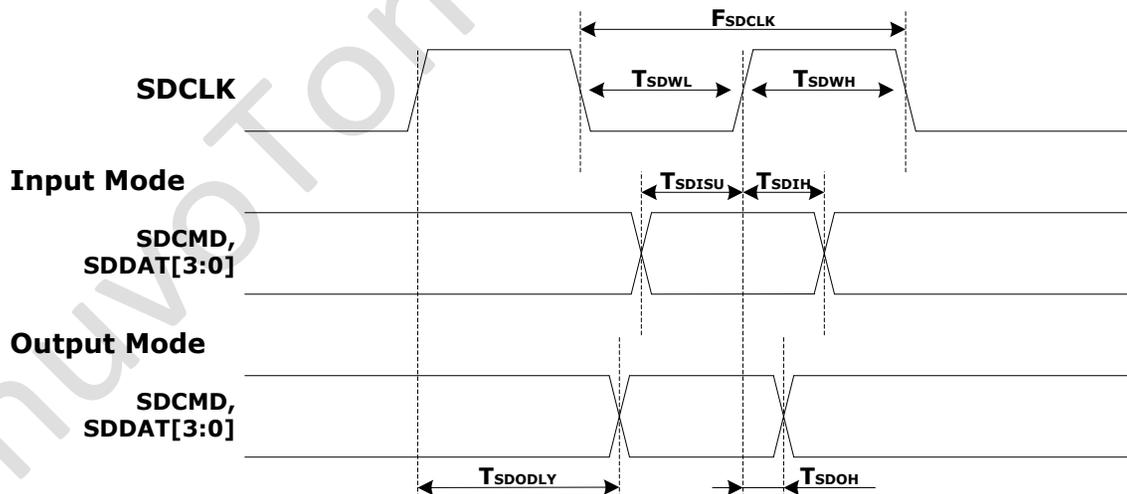

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
$F_{SPCLK}$	SPI0_CLK Clock Frequency		-	-	25	MHz
$T_{SPWL}$	SPI0_CLK Clock Low Time		20	-	-	ns
$T_{SPWH}$	SPI0_CLK Clock High Time		20	-	-	ns
$T_{SPISU}$	SPI0_DI Setup Time		10	-	-	ns
$T_{SPIH}$	SPI0_DI Hold Time		10	-	-	ns
$T_{SPODLY}$	SPI0_DO Output Delay Time		-	-	1	ns
$T_{SPOH}$	SPI0_DO Output Hold Time		0.2	-	-	ns

6.3.7 NAND Interface

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
$T_{NWL}$	Write Pulse Low Width		10	-	-	ns
$T_{NWH}$	NWR_ High Hold Time		10	-	-	ns
$T_{NODLY}$	ND[7:0] Output Delay Time		-	-	2.5	ns
$T_{NOH}$	ND[7:0] Output Hold Time		10	-	-	ns
$T_{NISU}$	ND[7:0] Data in Setup Time		3.2	-	-	ns
$T_{NIH}$	ND[7:0] Data in hold time		1	-	-	ns

6.3.8 SD Card Interface

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
<b>Clock SDCLK</b>						
$F_{SDCLK}$	Clock Frequency in Data Transfer Mode		-	-	50	MHz
$F_{SDCLK}$	Clock Frequency in Identification Mode		100	-	400	KHz
$T_{SDWL}$	Clock Low Time		10	-	-	ns
$T_{SDWH}$	Clock High Time		10	-	-	ns
<b>Input SDCMD, SDDAT[3:0] (referenced to SDCLK)</b>						
$T_{SDISU}$	Input Setup Time		6	-	-	ns
$T_{SDIH}$	Input Hold Time		2	-	-	ns
<b>Output SDCMD, SDDAT[3:0] (referenced to SDCLK)</b>						
$T_{SDODLY}$	Output Delay Time		-	-	14	ns
$T_{SDOH}$	Output Hold Time		2.5	-	-	ns

### 6.3.9 USB PHY Specifications

#### 6.3.9.1 USB DC Electrical Characteristics

Symbol	Parameter	Conditions	Min.	Typ	Max.	Unit
V <sub>IH</sub>	Input high (driven)		2.0	-	-	V
V <sub>IL</sub>	Input low		-	-	0.8	V
V <sub>DI</sub>	Differential input sensitivity	PADP-PADM	0.2	-	-	V
V <sub>CM</sub>	Differential common-mode range	Includes VDI range	0.8	-	2.5	V
V <sub>SE</sub>	Single-ended receiver threshold		0.8	-	2.0	V
	Receiver hysteresis		-	400	-	mV
V <sub>OL</sub>	Output low (driven)		0	-	0.3	V
V <sub>OH</sub>	Output high (driven)		2.8	-	3.6	V
V <sub>CRS</sub>	Output signal cross voltage		1.3	-	2.0	V
R <sub>PU</sub>	Pull-up resistor		1.425	-	1.575	kΩ
V <sub>TRM</sub>	Pull-down resistor		14.25	-	15.75	kΩ
Z <sub>DRV</sub>	Termination Voltage for upstream port pull up (RPU)		3.0	-	3.6	V
C <sub>IN</sub>	Driver output resistance	Steady state drive*	28	-	49.5	Ω
V <sub>IH</sub>	Transceiver capacitance	Pin to V <sub>SS</sub>	-	-	20	pF

Note: Driver output resistance does not include series resistor resistance.

#### 6.3.9.2 USB Full-Speed Driver Electrical Characteristics

Symbol	Parameter	Conditions	Min.	Typ	Max.	Unit
T <sub>FR</sub>	Rising time	CL = 50p	4	-	20	ns
T <sub>FF</sub>	Falling time	CL = 50p	4	-	20	ns

#### 6.3.9.3 USB High-Speed Driver Electrical Characteristics

Symbol	Parameter	Conditions	Min.	Typ	Max.	Unit
T <sub>FR</sub>	Rising time	CL = 5p	500			ns
T <sub>FF</sub>	Falling time	CL = 5p	500			ns

6.3.10 Specifications of 12-bit SARADC

PARAMETER	SYM	SPECIFICATIONS				TEST CONDITIONS
		MIN	TYP	MAX	UNIT	
Operating Voltage	$A_{VDD\_ADC}$	2.7	3.3	3.6	V	
Resolution	$R_{ADC}$	-	12	-	bit	
Reference Voltage	$V_{REF}$	2	-	$A_{VDD}$	V	
ADC input Voltage	$V_{IN}$	0	-	$V_{REF}$	V	
Sampling Rate	$F_{SPS}$	-	-	1M	Hz	ADC Clock = 16MHz Free Running Conversion
Integral Non-linearity Error (INL)	INL	-	$\pm 3$	-	LSB	
Differential Non-linearity Error (DNL)	DNL	-1	-	+1.5	LSB	
Offset Error	$E_{OFFSET}$		$\pm 1$	$\pm 3$	LSB	
SNR		-	62		dB	

**Note:** The performance measurement is in ADC only condition (all other IPs are in reset statue).

6.3.11 Specifications of 24-bit Delta-Sigma CODEC

Parameter	Sym	Specifications				Test Conditions
		Min.	Typ	Max.	Unit	
Reference						
VMID		-	$0.5 \cdot A_{VDD\_CODEC}$	-	V	
Microphone Bias						
Bias Voltage		-	$0.75 \cdot A_{VDD\_CODEC}$	-	V	
Maximum Output Current		-	-	3	mA	
Capacitive Load		-	-	50	pF	
Line Input						
Resolution		-	24	-	Bit	
Total Harmonic Distortion	THD	-	-80	-70	dB	
Dynamic Range	DR	80	90	-	dB	-60dB input, A-Weighted
S/N	SNR	80	90	-	dB	
Channel Separation		-	100	-	dB	
Channel Matching		-	0.2	-	dB	
Full Scale Output Voltage	VFS	-	$0.93 \cdot A_{VDD\_CODEC}/3.3$	-	dB	
Input Impedance		10	-	-	kΩ	
Input Capacitor		-	10	-	pF	
Headphone Output						
Total Harmonic Distortion	THD	-	-80	-	dB	RL = 0 Ohm, Po = 10mW
Total Harmonic Distortion	THD	-	-60	-	dB	RL = 32Ohm, Po = 10mW
S/N	SNR	90	93	-	dB	A-Weighted
Power Supply Current (No PLL, No Loading)						
$A_{VDD\_CODEC}$		-	8	-	mA	
$A_{VDD\_HP}$		-	4	-	mA	

**Note:** The performance measurement is in CODEC only condition (All other IPs are in reset statue).

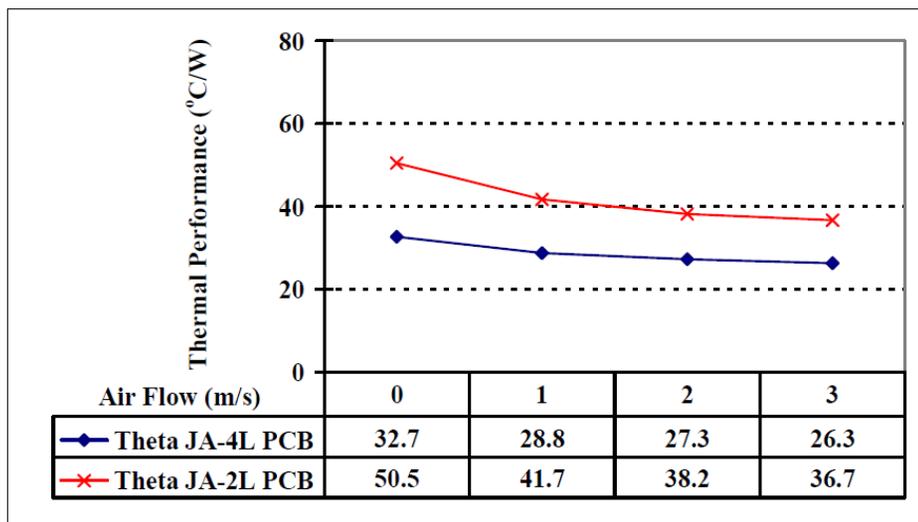

### 6.3.12 Specification of Low Voltage Reset

Parameter	Conditions	Min.	Typ	Max.	Unit
Operation voltage	-40°C ~ 85°C	2	3.3	3.6	V
LVD Detect Levels	LVD_SEL = 0 VDD rises	2.34	2.6	2.86	V
	LVD_SEL = 0 VDD falls	2.295	2.55	2.805	V
	LVD_SEL = 1 VDD rises	2.52	2.8	3.08	V
	LVD_SEL = 1 VDD falls	2.475	2.75	3.025	V
LVR Detect Levels	VDD rises	2.16	2.4	2.64	V
	VDD falls	2.115	2.35	2.585	V

### 6.3.13 Specifications of Power-on Reset (3.3V)

Parameter	Min.	Typ	Max.	Unit
Temperature	-20	25	85	°C
Reset voltage	1.05	1.57	1.99	V

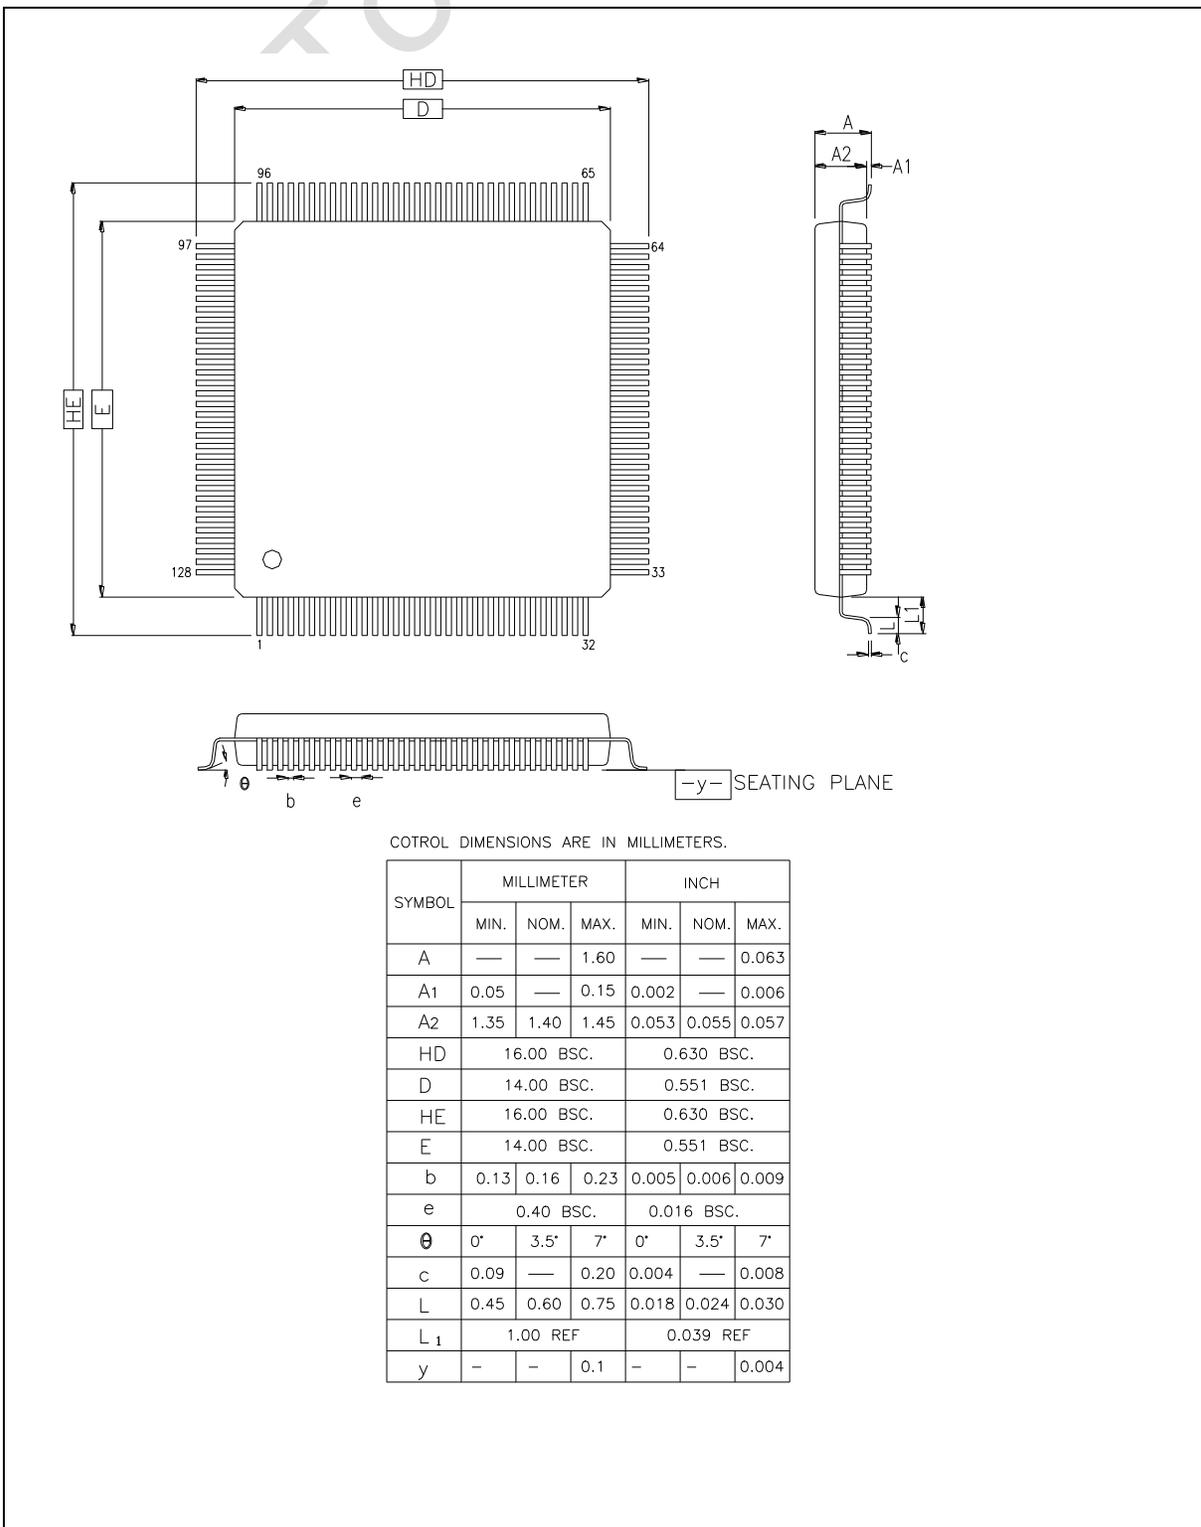

## 6.4 Thermal Characteristics of N9H26 Package

Thermal Performance of SLQFP under Forced Convection

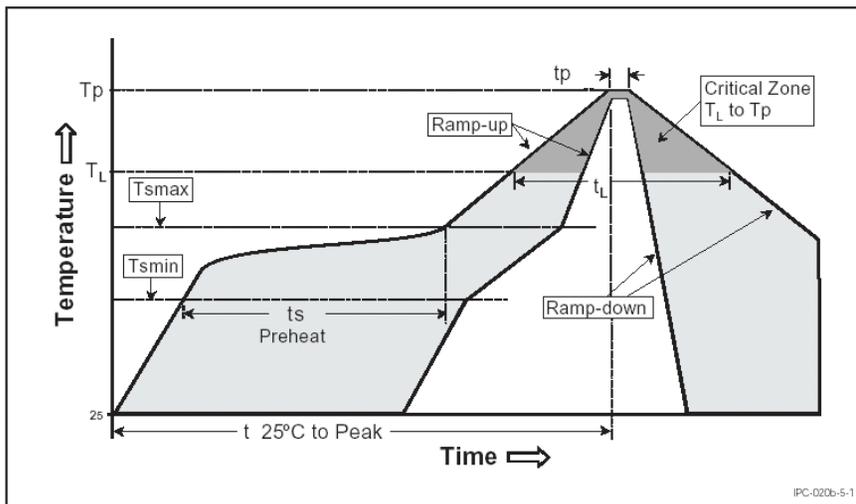

7 PACKAGE DIMENSIONS

7.1 128L LQFP (14x14x1.4mm footprint)

## 7.2 PCB Reflow Profile Suggestion

### 7.2.1 Profile Setting Consideration

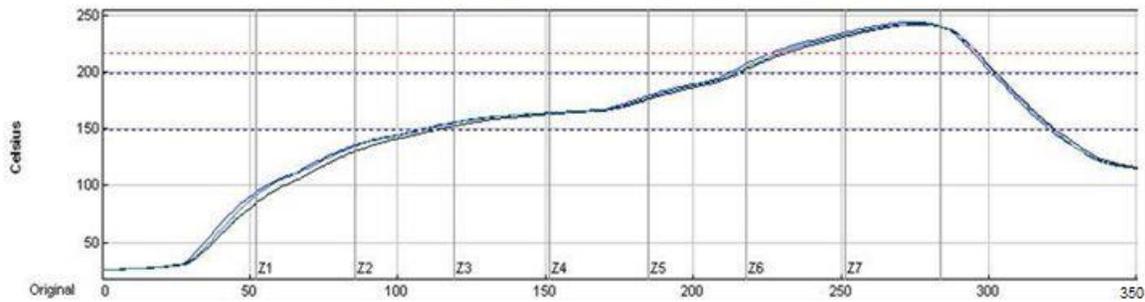

Profile Feature	Sn-Pb Eutectic Assembly		Pb-Free Assembly	
	Large Body	Small Body	Large Body	Small Body
Average ramp-up rate ( $T_L$ to $T_p$ )	< 3°C/second		< 3°C/second	
Preheat				
-Temperature Min ( $T_{smin}$ )	100°C		150°C	
-Temperature Max ( $T_{smax}$ )	150°C		200°C	
-Time (min to max) ( $t_s$ )	60-120 seconds		60-180 seconds	
Time maintained above:				
-Temperature ( $T_L$ )	183°C		217°C	
-Time ( $t_L$ )	60-150 seconds		60-150 seconds	
Peak Temperature ( $T_p$ )	225+0/-5°C		245+5/-5°C	
Time within 5°C of actual Peak Temperature ( $t_p$ )	10-20 seconds		10-30 seconds	
Ramp-down Rate	3°C/second max.		3°C/second max.	
Time 25°C to Peak Temperature	6 minutes max.		8 minutes max.	

Note: 1. All temperatures refer to topside of the package, measured on the package body surface.  
 2. Depends on other parts on board density and follower solder paste manufacturers's guideline

7.2.2 Profile Suggestion for N9H26 series

Reflow Profile for SiP on board Assembly

Preheat time	150°C—200°C: 105+/-15sec
Dwell time	Over 220°C: 70+5/-10 sec
Peak Temp	240 +10/-5°C
Ramp Up/Down Rate	Up: 3 +0/-2 °C / sec Down: 2 +0/-1°C / sec

**8 REVISION HISTORY**

<b>Date</b>	<b>Revision</b>	<b>Description</b>
2018, 04, 19	1.00	1. Preliminary version.

### Important Notice

**Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".**

**Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.**

**All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.**
